## INVISIBLESHIELD APPLICATION INSTRUCTIONS

INSTALLING YOUR INVISIBLESHIELD WITH DOUBLE TABS AND A SPRAY BOTTLE

TO APPLY YOUR INVISIBLESHIELD, READ AND FOLLOW THESE INSTRUCTIONS.  
FOR BEST RESULTS PLEASE VIEW THE APPLICATION VIDEO AT [ZAGG.COM/INSTALLATION](http://ZAGG.COM/INSTALLATION).

### CLEAN DEVICE WITH CLOTH

(cloth)

### Step 1: Prepare Your Device

Use the included microfiber cloth to completely clean your device's screen. Ensure you remove all lint and dust.

### REMOVE TAB 1

### Step 2: Prepare Your InvisibleShield

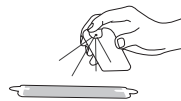

Remove the adhesive liner using the tab marked with 1s.

Lay the InvisibleShield on a flat surface, adhesive side up.

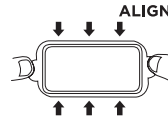

Use the included Application Solution spray to coat and prime the adhesive.

### PRIME

Spray on the exposed adhesive side of the shield.

Leave the Application Solution coating on the adhesive.

### ALIGN

### Step 3: Apply Your InvisibleShield

Use the EZ Apply® tabs to align the InvisibleShield on your device (adhesive side down). Focus on the perimeter of your device to ensure proper alignment.

### SQUEEGEE

Using the included squeegee, start at one end of your device and **FIRMLY** squeegee in one smooth motion to the other end.

Continue to squeegee firmly until all bubbles are gone. The more pressure you apply with the squeegee, the better the application.

**NOTE:** To apply your InvisibleShield to devices with a curved screen follow the instructions above, and then press the InvisibleShield over the edges of your device using your thumbs. Start at the bottom of your device and press the film over the curve to the edge of the screen. Continue this process up your screen until the entire InvisibleShield is applied to the edge of your device.

### FINISH

### Step 4: Finish

**SLOWLY** peel off the plastic layer using one of the tabs at either end of the InvisibleShield.

**NOTE:** If your InvisibleShield lifts off your device when removing the plastic, stop peeling and squeegee the InvisibleShield back down. Wait three to five minutes and then peel off the plastic.

Any micro-bubbles or cloudiness will disappear within hours. Enjoy!

## INVISIBLESHIELD APPLICATION INSTRUCTIONS

INSTALLING YOUR INVISIBLESHIELD WITH NO DOUBLE TABS

TO APPLY YOUR INVISIBLESHIELD, READ AND FOLLOW THESE INSTRUCTIONS.  
FOR BEST RESULTS PLEASE VIEW THE APPLICATION VIDEO AT [ZAGG.COM/INSTALLATION](http://ZAGG.COM/INSTALLATION).

### CLEAN DEVICE WITH CLOTH

(cloth)

### Step 1: Prepare Your Device

Use the included microfiber cloth to completely clean your device's screen. Ensure you remove all lint and dust.

### REMOVE TAB 1

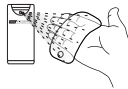

### Step 2: Prepare Your InvisibleShield

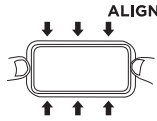

To prevent fingerprints from getting on your InvisibleShield, wet your fingertips with the application solution before handling it.

Remove the cover sheet from the InvisibleShield, and peel the InvisibleShield off its backing.

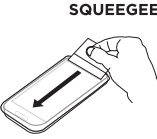

Hold the InvisibleShield in one hand, adhesive side up, and thoroughly moisten the front and back sides of the InvisibleShield with the application solution. Do NOT dampen your device.

### ALIGN

### Step 3: Apply Your InvisibleShield

Apply the InvisibleShield to your phone, adhesive side down, and slide into place.

### SQUEEGEE

Use the squeegee to push excess moisture and bubbles away from the center of the screen toward the edges. Do NOT push moisture towards any open or uncovered ports.

### FINISH

### Step 4: Finish

Soak up excess moisture with a lint-free cloth or paper towel. Leave your device off for 12 to 24 hours. Micro-bubbles and imperfections will work themselves out in two to three days.

### Tips:

Make sure your installation area is clean and free of debris and skin oils.

Wash your hands before installing your InvisibleShield.

Before installation, check where the cutouts in the InvisibleShield fit over the speaker, camera, and other features on your phone. Hold the InvisibleShield over the phone and eyeball how you will align it when you install it.

Use firm, steady pressure on the squeegee to press out all moisture and air bubbles.

To speed installation, you can use a low source of heat such as a lamp or hair dryer on the cool setting (not warm or hot).
